

**Abstract of the Disclosure**

**METHOD OF ROLLING FOLDED MEMBRANE  
SHEETING WITH PREAPPLIED SEAM TAPE**

Membrane sheeting with preapplied seam tape is rolled up by applying the seam tape along a first edge and folding a second edge of the membrane on itself so that it merely abuts an inner edge of the seam tape but does not overlap the seam tape. This forms a folded sheet which has a uniform thickness across its entire width. This can then be rolled in the standard manner to form a roll which has a uniform diameter throughout.
